FT4GL Glorioso Islands –update May 27

It's been four days since Marek started his activity. Upon his arrival, the location planned for the station had to be changed due to a problem with the building's air conditioning making it impossible to operate there. Another more cramped air-conditioned room was found, modifying the initial antenna installation plan with difficulties in optimizing the choice of locations in view of the structures present.

Today, Marek was able to complete the installation of the second Hexbeam, so for the moment there are two Hexbeams, a vertical from 40 to 10m, a vertical 30m, and the 5 element beam 6m; remaining the verticals 160 /80m to be assembled soon.

Two stations are active as planned, some electrical problems have been reported with the inverters, resulting in some temporary outages, as well as interference linked to equipment external to our installations, which is being resolved and a problem with an amplifier.

For the logs, they are posted online every day, either the morning or evening following the previous day's traffic. For all requests, contact f8crs@protonmail.com who is responsible for checking and possibly validating the requests. As of May 26, more than 16,000 QSOs, the dupe rate is decreasing. You can consult the log at the following [link](#).

His activity is intensive, which he carries out in spartan conditions at the station, which is also his workplace and place to sleep with very little sleep.

We receive various requests for low bands, 6m, RTTY.... We ask the community to be patient, the operation has just started, it will last three weeks, as a reminder Marek is alone and cannot respond to all requests, the priority is immediately to ATNO, the time to resolve our last technical problems.

Our pilots are starting to give us feedback in order to direct traffic more precisely to satisfy the greatest number of OMs.
